Daily Report Dashboard – Requirements Definition

Shopee & TikTok Shop | Vietnam E-Commerce Operations

Date	2026-03-26	**Version**	v1.0 (EN)
Scope	Daily Report – KPI Cards / Product Breakdown	**Recipient**	Data Analytics Team

1. Background & Purpose

This document defines the data requirements and calculation logic for the Daily Report dashboard covering Vietnam Shopee and TikTok Shop operations. It serves as the reference specification for the data analytics team responsible for populating and maintaining the dashboard.

The document covers two areas:

- KPI Cards section – metric definitions, groupings, and calculation formulas
- Product Breakdown section – per-product data allocation method

2. Platform GMV Structure (Prerequisite)

The GMV hierarchy from platform raw data is defined as follows. Please adhere strictly to the source and calculation sequence of each item.

Item	Data Source	Description
GMV	Platform auto	Revenue based on the listed retail price of products (before any discount applied).
Net GMV (= GMV × ~85%)	Platform auto	Revenue based on the discounted price entered at the time of product listing. This is the price buyers perceive as the actual selling price. Typically ~85% of GMV. Collected directly from platform raw data.
Seller Discount	Platform auto	Additional discount applied by the seller on top of Net GMV.
Shopee Discount	Platform auto	Discount funded by Shopee platform. Has no impact on seller revenue or profit. → Displayed as reference only. Excluded from CM calculation.
Final Checkout Price	–	Net GMV − Seller Discount − Shopee Discount = Amount paid by buyer

3. KPI Cards Section – Required Configuration

3-1. Overall Structure

KPI Cards are organized into 4 groups as described below. All monetary figures must be displayed in both VND and KRW.

* VND/KRW exchange rate: fixed value to be applied (rate to be confirmed separately).

① Revenue			
KPI Metric	**Unit**	**Data Source**	**Notes**
Net GMV	VND / KRW	Platform auto	Primary revenue baseline. Display day-over-day change.
Items Sold	units	Platform auto	Total units sold.
Orders	count	Platform auto	Total number of orders.

② Promotional Costs			
KPI Metric	**Unit**	**Data Source**	**Notes**
AD Spend	VND / KRW	Platform Ads auto	Direct integration from Shopee Ads / TikTok Ads.
Affiliate Commission	VND / KRW	Platform auto	Net affiliate commission, excluding Booking Fee.
Affiliate Booking Fee	VND / KRW	Manual input (weekly)	Contracted separately. Weekly total ÷ 7 = daily average applied.
Livestream Fee	VND / KRW	Manual input (weekly)	Streamer fee (labor cost). Weekly total ÷ 7 = daily average applied.
② Promotional Costs Total	VND / KRW	Calculated	= AD Spend + Affiliate Commission + Affiliate Booking Fee + Livestream Fee → Display total amount and % of Net GMV side by side. → Reducing this ratio directly improves CM%.

③ Discount Costs			
KPI Metric	**Unit**	**Data Source**	**Notes**
Seller Voucher	VND / KRW	Platform auto	No product-level confirmed data. Allocated by Net GMV proportion.
Seller Discount	VND / KRW	Platform auto	Product-level confirmed data used.
Free Gift	VND / KRW	Platform auto	Product-level confirmed data used.
Shopee Discount	VND / KRW	Platform auto	[Reference only] Funded by Shopee platform. Not a seller cost. → Excluded from total calculation. Display as reference figure only.
③ Discount Costs Total	VND / KRW	Calculated	= Seller Voucher + Seller Discount + Free Gift (Shopee Discount excluded) → Display total amount and % of Net GMV side by side. → Reducing this ratio directly improves CM%.

④ Profitability			
KPI Metric	**Unit**	**Data Source**	**Notes**

Contribution Margin (CM)	VND / KRW	Calculated	Refer to formula in Section 4.
CM%	%	Calculated	CM ÷ Net GMV × 100
AD ROAS	multiple (x)	Calculated	AD GMV ÷ AD Spend (ad efficiency indicator)
AD GMV	VND / KRW	Platform Ads auto	Revenue attributed to ads. Sourced directly from Shopee Ads / TikTok Ads.

---

4. Contribution Margin (CM) Formula

```
CM  =  Net GMV
       -  AD Spend                          <- Promotional costs
       -  Affiliate Commission (excl. Booking Fee)
       -  Affiliate Booking Fee             <- Weekly input -> daily
avg.
       -  Livestream Fee                    <- Weekly input -> daily
avg.
       -  Seller Voucher                    <- Discount costs
       -  Seller Discount
       -  Free Gift
       -  Platform Fee                      <- Platform & COGS
       -  Prime Cost
```

* Shopee Discount is excluded from the CM formula as it is funded by the platform. Display as a reference figure only.
* Affiliate Booking Fee and Livestream Fee are entered manually once per week. Apply as daily average (weekly total ÷ 7).

---

5. Product Breakdown Section – Data Allocation Method

For items where product-level confirmed data is not available, the daily total cost is allocated to each product proportionally based on Net GMV.

Item	Product-level Data	Allocation Basis	Notes
Net GMV	Confirmed	–	Collected directly from platform raw data.
AD Spend	Confirmed	–	Per-product data from platform ad system.
Affiliate Commission	Confirmed	–	Platform auto collection.
Platform Fee	Confirmed	–	Platform auto collection.
Prime Cost	Confirmed	–	Input separately per product.
Seller Discount	Confirmed	–	Platform auto collection.
Free Gift	Confirmed	–	Platform auto collection.
Seller Voucher	Allocated	Net GMV proportion	Daily total Seller Voucher × (Product Net

Item	Product-level Data	Allocation Basis	Notes
			GMV ÷ Total Net GMV)
Affiliate Booking Fee	Allocated	Net GMV proportion	Weekly input ÷ 7 = daily average, then Daily average × (Product Net GMV ÷ Total Net GMV)
Livestream Fee	Allocated	Net GMV proportion	Weekly input ÷ 7 = daily average, then Daily average × (Product Net GMV ÷ Total Net GMV)
CM / CM%	Calculated	–	Per-product CM derived after all items above are applied.

* Allocated items (highlighted in yellow) are estimates. It is recommended to visually distinguish these in the dashboard (e.g., cell shading or an indicator icon).

---

6. Manual Input Requirements

Item	Frequency	Responsible	Processing Method
Affiliate Booking Fee	Weekly	Operations team	Weekly total ÷ 7 → daily average → allocated by product Net GMV proportion
Livestream Fee	Weekly	Operations team	Weekly total ÷ 7 → daily average → allocated by product Net GMV proportion
VND/KRW Exchange Rate	TBD	Operations team	Fixed rate applied. Retroactive adjustment policy to be confirmed separately.

* This document is the English version for distribution to the Vietnam counterpart team.
